

Solution Sheet

Plant Mapping

NEED: A custom built compression station operated by our client performed better than other units in their system. When it came time to add another compression unit to their system they were unable to duplicate this custom built unit due to the lack of documentation and as-built schematics.

SOLUTION: GDM performed a laser scan of the units that the client wanted to replicate. From the laser scan data we created a 3-D AutoCAD model that was used to create ISO Drawings and 2-D Plans.

SPECIFICATIONS: Scanworlds- 20
Control- 80 Points
Field time 2 Days
Client- Withheld per client request
